

## Data Sheet

# Pressure switch and Thermostat Type **KP** and **KPI**

For industrial applications

The KP and KPI pressure switches and thermostats are used for control, monitoring and alarm systems in a wide variety of industry applications.

KP pressure switches are mainly used for gaseous fluid whereas KPI pressure switches are more for liquid and gaseous fluid. The products are available in IP30 enclosure as well as IP55 enclosure.

The KP pressure range include special designed pressure switches and limiters for steam boilers and other heating applications.

For water pump control and protection (dry run) the dual pressure switch KP44 is suitable and secure improved life time of the water pump.

## Features

### Features

- Wide setting range
- Shock and impact resistant
- Snap action electrical contacts minimize chatter, bounce, and wear, and ensure long term electrical and mechanical reliability
- Small dimensions - space saving and easy to install in panels
- Electrical connection from front of the unit makes rack mounting easier and also saves space
- Suitable for alternating current and direct current
- Single pressure switches and thermostats are fitted with a single pole double throw contact system (SPDT)
- Can be used for both liquids and gases (KPI)
- Manual trip function enables electrical connections verification without any tools or pressure changes in the application
- Versions with automatic and manual reset available
- For demineralized water, there are special KP models with wetted parts made of stainless steel (AISI 316L)

## Functions

### KP and KPI Pressure switch

Figure 1: Key sketch of KP pressure switch

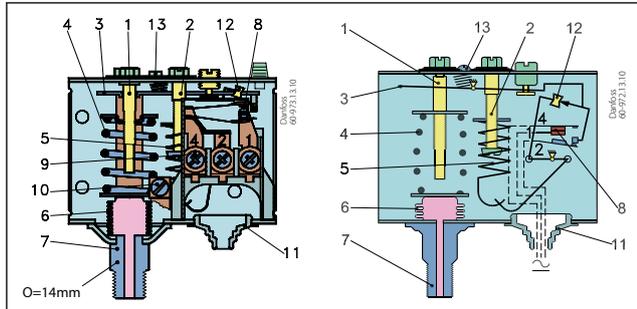

Figure 2: Key sketch of KPI pressure switch

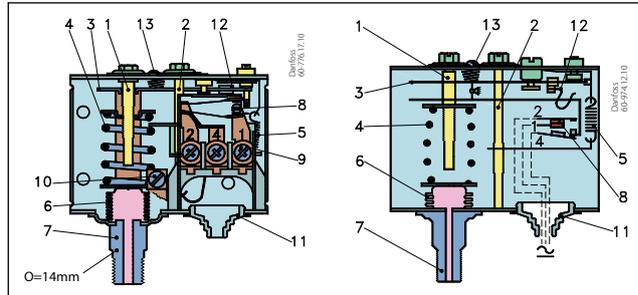

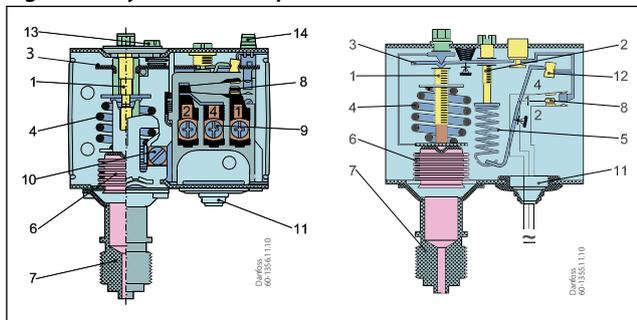

Figure 3: Key sketch of KP pressure switch, boiler version

1	Setting spindle	8	Contact system
2	Differential setting spindle	9	Connection terminals
3	Main arm	10	Earth terminal
4	Main spring	11	Cable entry
5	Differential spring	12	Omega spring (KPI)
6	Bellows	12	Tumbler (KP)
7	Pressure connector	13	Locking screw
		14	Manual reset

The contact system in KP pressure switches has a snap function. This means that the bellows is active only when the cut-in or cut out value is reached.

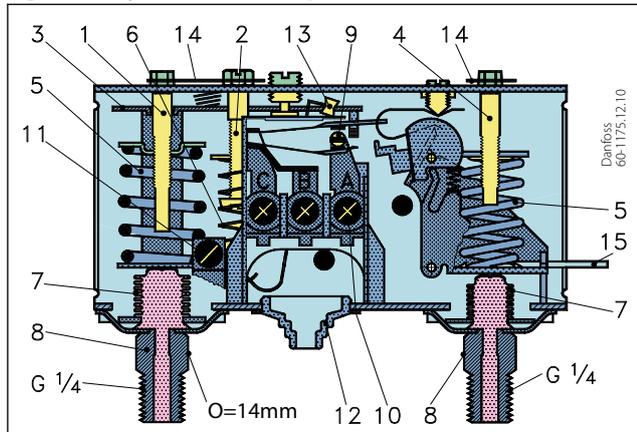

The bellows is connected to the pressure of the controlled plant via the connector.

Danfoss KPI pressure switches are designed so that the bellows moves in the same proportion as the pressure switches change.

To ensure a snap function on contact change over, an omega spring is located between bellows and contact system.

## KP 44 pressure switch

Figure 4: Key sketch of KP 44 pressure switch

1	Lefthand pressure setting spindle	9	Contact system
2	Differential setting spindle	10	Terminal
3	Main arm	11	Earth terminal
4	Righthand pressure setting spindle	12	Cable entry
5	Main spring	13	Tumbler
6	Differential spring	14	Locking plate
7	Bellows	15	Impulse lever
8	Pressure connections		

### Water supply from reservoir or well

The contact system in the KP 44 has a snap-action function and allows the bellows moves only when the cut-in or cut-out value is reached.

If water is running short in the well or reservoir, the pump will no longer be able to increase the pressure to the cut-out value. Consequently the pump will keep running - perhaps without water. However, the KP 44 pressure switch will stop the pump as soon as the righthand bellows pressure drops below the safety cut-out setting.

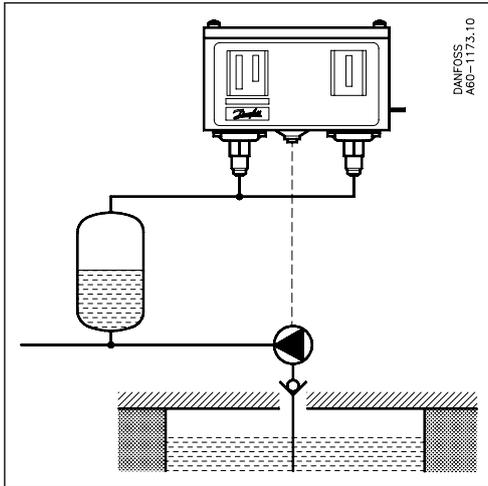

The pump can be started again by lifting the impulse lever. The pump will continue to operate when the impulse lever is released, provided that the righthand bellows pressure is higher than the safety cut-out setting plus a fixed differential of 1 bar. If this is not the case, the pump will cut-out again indicating insufficient water supply.

### Pressurized water supply direct to pump

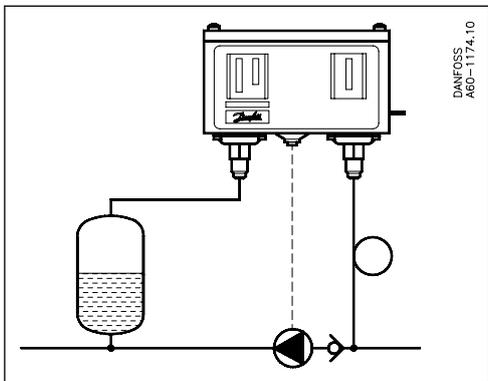

When water supply fails on the inlet side, the pump will no longer be able to boost the pressure to the cut-out value. Consequently the pump will keep running - perhaps without water. However, the KP 44 pressure switch will stop the pump as soon as the pressure in the pump suction line drops below the safety cut-out setting. The pump will automatically start again when the pump suction pressure has reached the level of 1 bar above the safety cut-out setting.

Automatic start-up will only take place if the righthand bellows is connected to the pump suction line. Air pockets should be avoided to prevent the pump from starting up on air pressure rise, without the presence of water.

## Pressure switch and Thermostat, Type KP and KPI

In a hydrophore system where water is pumped from a well or an open tank, both bellows are connected to a pressure outlet on the air side in the pump pressure line, if possible.

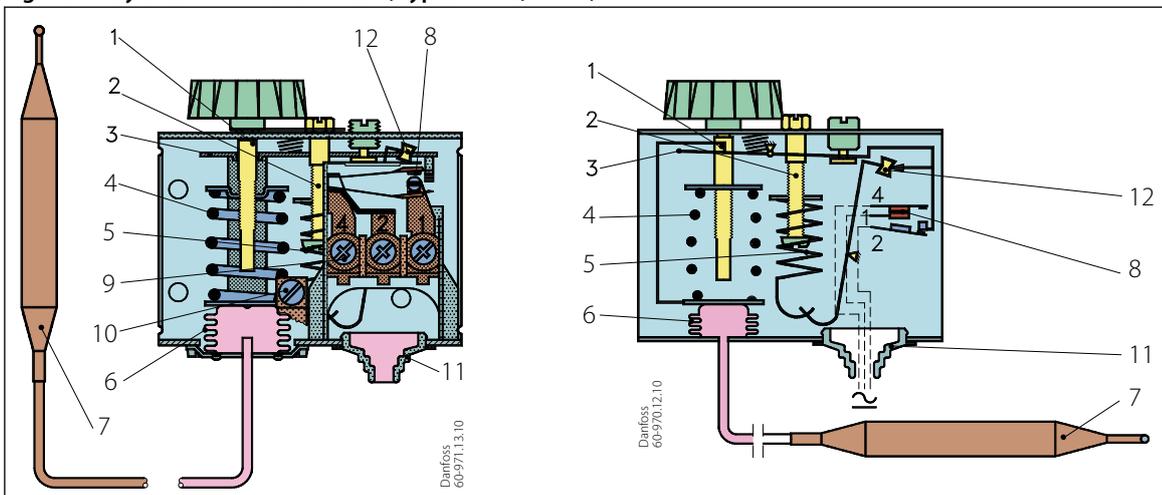

In a booster system receiving pressurized water the righthand bellows is connected

- to the low pressure side of the pump for automatic start-up
- to the high pressure side of the pump for manual start-up

The lefthand bellows is always connected to the high pressure side of the pump.

### **KP thermostat**

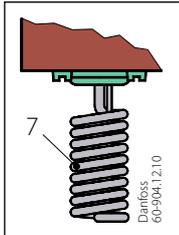

Figure 5: Key sketch of KP thermostat, types KP 78, KP 79, KP 81

## Pressure switch and Thermostat, Type KP and KPI

1	Temperature setting spindle	7	Sensor
2	Differential setting spindle	8	Contact system
3	Main arm	9	Connection terminals
4	Main spring	10	Earth terminal
5	Differential spring	11	Cable entry
6	Bellows	12	Tumbler

Figure 6: KP 75 room sensor

The contact system in KP thermostats has a snap function. This means that the bellows is active only when the cut-in or cut-out value is reached.

Enclosure, IP30 grade		Unit must be mounted on a flat surface / a flat fitting and all unused holes covered			
Enclosure, IP44 grade		Mounted as IP30 plus fitting of top cover, code no. 060-109766			
Enclosure, IP55 grade		Unit mounted in a special IP55 enclosure, code no. 060-033066 or 060-062866			
Cable entry		Rubber cable gland entry for 6 – 14 mm diameter cables			
Mounted on back plate / wall bracket		Vibration proof in the range 0 – 1000 Hz, 4 g [1g = 9.81 m/s <sup>2</sup> ]			
Mounted on angle bracket		Not recommended in areas where vibrations occur			

**Table 2: Contact system and application**

Switch type – single pole double throw	Switch action	Application
<p>SPDT</p> <p>Line ~ 16A 1 4 2 M</p> <p>DANFOSS 60-1031</p>	Terminal 1 – 4 close high and open low Terminal 1 – 2 can be used as low pressure alarm	Low pressure cut-out
SPDT	Terminal 1 – 2 open high and close low Terminal 1 – 4 can be used as high pressure alarm	High pressure cut-out

**Figure 7: Setting**

**Cut-in and cut-out pressures of the system should always be checked with an accurate pressure gauge.**

**Pressure setting for switches with automatic reset.**

## Pressure switch and Thermostat, Type KP and KPI

- Set the cut-in pressure on the “CUT-IN” scale (range scale).
- Set the differential on the “DIFF” scale.

The cut-out pressure must be above absolute vacuum ( $p_e = -1$  bar).

For high pressure switches the restart pressure is equal to cut-out pressure minus differential.

### Pressure switches with manual reset

Set the cut-out pressure on the “CUT-OUT” scale (range scale).

High pressure limiters can be manually reset when the pressure is equal to the stop pressure minus the differential.

#### **i** NOTE:

For low pressure switches the restart pressure is equal to cut-out pressure plus differential value.

## Dual pressure switch

**Table 3: Dual pressure switch**

Temperature	Range
Ambient temperature [°C]	-40 – 65 °C (for max. 2 hours up to 80 °C)
Media temperature [°C]	Max. 100 °C
Fluid	Liquids
Parts in contact with fluid	Bellows Phosphor bronze, CuSn6 Pressure connector Free-cutting steel (nickel plated)
Contact system	
Contact load, Silver	<b>Alternating current:</b> AC-1: 16 A, 400 V AC-3: 16 A, 400 V AC-15: 10 A, 400 V  <b>Direct current:</b> DC-13: 12 W, 220 V
IP level	IP22
Cable entry	Rubber cable gland entry for 6 – 14 mm diameter cables
Mounted on backplate or wall bracket	Vibration-proof in the range 0 – 1000 Hz, 4 g [ $1g = 9.81 \text{ m/s}^2$ ]
Mounting on angle bracket	Not recommended for areas where vibration occurs

### Safety cut-out setting

The righthand bellows will automatically cut-out the pump at the safety cut-out setpoint. Automatic start-up, if any, will take place when the pressure has reached the level of 1 bar above the setpoint. Manual cut-in is made by lifting the impulse lever and releasing it again when the pressure has increased by min. 1 bar. The safety cut-out setpoint is normally determined by the static pressure (the water column). However, in order to avoid disturbing signal interaction, care should be taken to ensure that the safety cut-out setting is at least 1.5 bar lower than the control pressure cut-in setting. See table with pressure setting examples below

**Table 4: Pressure settings**

Required tap water pressure	≥ 2.3 bar	≥ 4.0 bar	≥ 5.0 bar	≥ 8.0 bar
Control pressure cut-out setting	3.0 bar	5.0 bar	8.0 bar	12 bar
Differential	0.7 bar	1.0 bar	3.0 bar	4.0 bar
Control pressure cut-in setting	2.3 bar	4.0 bar	5.0 bar	8.0 bar
Max. safety cut-out setting	0.8 bar	2.5 bar	3.5 bar	6.0 <sup>(1)</sup> bar

<sup>(1)</sup> 6.0 bar is the normal max. setpoint

### Control pressure settings

Control pressure cut-out setpoint is set on the lefthand pressure setting scale. The differential is set between 0.7 and 4 bar. The control pressure cut-in setting will be the cut-out control pressure less the differential.

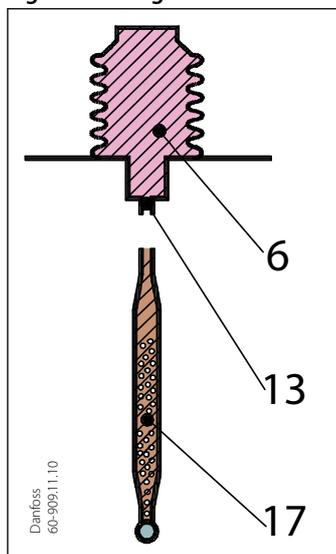

## Thermostat

**Table 5: Thermostat**

Temperature	Range
Ambient temperature [°C]	-40 – 65 °C (for max. 2 hours up to 80 °C)
Sensor material	Tinned copper Cu/Sn5
Contact system	<p>SPDT Line ~ 16A 1 4 2 3 M DANFOSS 60-1031</p> <p>Single-pole double throw (SPDT)</p>
Contact load, Silver	<p><b>Alternating current:</b> AC-1: 16 A, 400 V AC-3: 16 A, 400 V AC-15: 10 A, 400 V</p> <p><b>Direct current:</b> DC-13: 12 W, 220 V</p>
Contact load, Gold plated contact set	See <a href="#">Table 6</a>
Enclosure, IP30 grade	Unit must be mounted on a flat surface / a flat fitting and all unused holes covered
Enclosure, IP44 grade	Mounted as IP30 plus fitting of top cover, code no. 060-109766
Enclosure, IP55 grade	Unit mounted in a special IP55 enclosure, code no. 060-033066 or 060-062866. Exception: KP 75
Cable entry	Entry for 6 – 14 mm diameter cable
Mounted on backplate or wall bracket	Vibration-proof in the range 0 – 1000 Hz, 4 g [1 g = 9.81 m/s <sup>2</sup> ]
Mounted on angle bracket	Not recommended for areas where vibration occurs

## Charges

**Figure 8: Charges**

- |    |                |
|----|----------------|
| 6  | Bellows        |
| 7  | Sensor         |
| 13 | Capillary tube |

### Absorption charge

The charge consists partly of a superheated gas and partly of a solid substance with a large absorption surface.

The solid substance is concentrated in the sensor, and consequently it is always the sensor that comprises the temperature-regulating part of the thermostatic element.

The sensor can be placed both warmer or colder than the thermostat housing and capillary tube. However, placing it in an ambient temperature higher or lower than 20 °C can affect the accuracy of the scale.

**Setting**

**Thermostats with automatic reset**

Set the upper limit temperature on the range scale. Then set the differential on the DIFF scale. The temperature set on the range scale is also the temperature at which contact changeover re-occurs on rising temperature. The contacts changeover when the temperature has fallen to a value lower than that set on the DIFF scale.

If at lower settings the plant will not start/stop, the reason might be that the differential has been set too high.

**Thermostats with minimum reset**

Set the temperature on the range scale. The differential setting is fixed.

Min. reset units will restart after the temperature at the thermostat sensor has risen by a value greater than that of the fixed differential.

**Thermostats with maximum reset**

Set the stop temperature on the range scale. The differential setting is fixed.

Max. reset units will restart after the temperature at the thermostat sensor has fallen by a value greater than that of the fixed differential.

## Terminology

### Range setting / Set point

The pressure range within which the unit will give a signal (contact changeover).

### Differential

The difference between contact changeover on rising and falling pressure. The differential is a condition for stable automatic plant operation.

### Manual reset

A unit with manual reset can only be restored to operational mode by activation of the external reset button. Min. reset units will restart after the pressure has risen by a value greater than that of the fixed differential. Max. reset units will restart after the pressure has fallen by a value greater than that of the fixed differential.

### Automatic reset

Units with automatic reset restart automatically after stop.

### Permissible operating pressure

The highest permissible constant pressure or pressure variation the unit can be exposed to.

### Maximum test pressure

The maximum pressure applied in strength or leakage tests on heating system or components thereof.

### Maximum working pressure

The maximum permissible pressure for safe functioning of a heating system or any of its parts.

### Snap function

A specific contact force is maintained until snap is initiated. The time over which contact force reaches zero is a few milliseconds; therefore, contact bounce cannot occur as a result, for example, of slight vibrations before cut-out.

The snap-action contact system will continue to function even when micro-welds are created between the contacts during cut-in.

The force created to separate the contacts is strong, and instantly shears off all contact surface welds that have been created as the result of cut-in action.

These design features ensure that the cut-out point of the KP control remains very accurate and completely independent of the magnitude of the current load.

### Current ratings:

## Pressure switch and Thermostat, Type KP and KPI

---

AC – 1	The alternating current rating, in amperes, of the non-inductive, slightly inductive loads or resistive furnaces
AC – 3	The alternating current rating, in amperes, of the squirrel-cage motors: starting, plugging, inching
AC – 15	The alternating current rating, in amperes, of electromagnetic loads (>72VA)
DC – 13	The direct current rating, in amperes, of electromagnets

## Ordering

		Int. diameter 9.6 mm, insert depth 465 mm (brass). Ext. diameter 11 mm.	1	017-421666
		Media temperature for sensor: 250 °C This temperature can be increased by applying a different gasket material		
Heat-conductive aluminium paste	Tube 	For KP and RT thermostats with sensor mounted in a sensor pocket. Temperature range: -20 – 150 °C (short-lived 220 °C)	1	041E0115
		Tube with 6 g aluminium paste		

## Certificates, declarations, and approvals

The list contains all certificates, declarations, and approvals for this product type. Individual code number may have some or all of these approvals, and certain local approvals may not appear on the list.

Some approvals may change over time. You can check the most current status at [danfoss.com](http://danfoss.com) or contact your local Danfoss representative if you have any questions.

**Table 15: Certificates, declaration and approvals**

Document name	Document type	Document topic	Approval authority
BK_W_0862_01_2018	Food and Health - Performance Certificate		PZH
RU Д-ДК.ГА02.В.03367	EAC Declaration	EMC	EAC
RU C-ДК.БЛ08.В.00063_18	Electrical - Safety Certificate	EMC/LVE	EAC
ELE-086320XG-003	Marine - Safety Certificate		RINA
UA.10146.D.00075-19	UA Declaration	EMCD/LVD	LLC CDC EURO TYSK

- CE-marked in accordance with LVD 2014/35/EU: EN 60947-1, EN 60947-4-1, EN 60947-5-1
- Underwriters Laboratories Inc., UL
- China Compulsory Certificate, CCC (excluding boiler versions)

## Online support

Danfoss offers a wide range of support along with our products, including digital product information, software, mobile apps, and expert guidance. See the possibilities below.

### The Danfoss Product Store

The Danfoss Product Store is your one-stop shop for everything product related—no matter where you are in the world or what area of the cooling industry you work in. Get quick access to essential information like product specs, code numbers, technical documentation, certifications, accessories, and more.

Start browsing at [store.danfoss.com](https://store.danfoss.com).

### Find technical documentation

Find the technical documentation you need to get your project up and running. Get direct access to our official collection of data sheets, certificates and declarations, manuals and guides, 3D models and drawings, case stories, brochures, and much more.

Start searching now at [www.danfoss.com/en/service-and-support/documentation](https://www.danfoss.com/en/service-and-support/documentation).

### Danfoss Learning

Danfoss Learning is a free online learning platform. It features courses and materials specifically designed to help engineers, installers, service technicians, and wholesalers better understand the products, applications, industry topics, and trends that will help you do your job better.

Create your Danfoss Learning account for free at [www.danfoss.com/en/service-and-support/learning](https://www.danfoss.com/en/service-and-support/learning).

### Get local information and support

Local Danfoss websites are the main sources for help and information about our company and products. Find product availability, get the latest regional news, or connect with a nearby expert—all in your own language.

Find your local Danfoss website here: [www.danfoss.com/en/choose-region](https://www.danfoss.com/en/choose-region).
